DOCUMENT-IDENTIFIER: US 6084855 A

TITLE: Method and apparatus for providing  
fair traffic scheduling among aggregated internet  
protocol flows

----- KWIC -----

Detailed Description Text - DETX (37):

In practice, for example, in case of ATM, this scheme would lead to the introduction of a new ATM traffic class variation, subclass that varies from one connection to another. In addition to standard UBR traffic, there may be designated "Fair UBR" which would be defined by the number of flows and a priority factor. The number of flows is a dynamic factor, whereas a priority coefficient can be more static in nature.
